Assume an MS Excel file has 4 worksheets - Sheet1, Sheet2, Sheet3 and Sheet4. Insert a sheet before Sheet1 and name that tab as Summary. On the Summary tab, one may want to generate a list of all sheet names from cell C7 onwards.

### **Generate a list of all tabs names without using VBA**

You've entered a formula, but it's not working. Instead, you've got this message about a "circular reference." Millions of people have the same problem, and it happens because your formula is trying to calculate itself, and you have a feature called iterative calculation turned off.

### **Remove or allow a circular reference - Office Support**

Entering Data A new worksheet is a grid of rows and columns. The rows are labeled with numbers, and the columns are labeled with letters. Each intersection of a row and a column is a cell. Each cell has an address, which is the column letter and the row number. The arrow on the worksheet to the right points to cell A1, which is currently highlighted, indicating that it is an active cell.

Presentations to the ED for self-harm or risk of self-harm are very common and are increasing, in all age groups. Regardless of the motivation or intent, these behaviours are associated with a high risk of death. Consider the use of the Mental Health Act 2000 and risk assessments (such as removal of weapons and close observation).
