One type of invertebrate respiratory system is the open respiratory system composed of spiracles, tracheae, and tracheoles that terrestrial arthropods have to transport metabolic gases to and from tissues. The distribution of spiracles can vary greatly among the many orders of insects, but in general each segment of the body can have only one pair of spiracles, each of which connects to an ...

The Laurentian Great Lakes cover 245,000 km² and contain the largest total volume of nonsaline water on earth, approximately 24,600 km³, which is 21% of the world's surface freshwater (Wetzel, 2001). Because of their importance as a water supply, in fisheries, recreation, and other commerce,

studies on the phytoplankton and algal dynamics in the Great Lakes have been conducted for many years.
