Chapter 7 — Applications of Integration 5

The definition of the work done by a constant force F on a particle is given by the dot product (sometimes called the scalar product) $\text{Work} = \text{Force} \cdot \text{Displacement}$ or $\text{Work} = F \cdot (q - p)$ if p is the starting position and q the ending position. Maybe it is no harm to recall a few little things about dot products. If $a = a_1 i + a_2 j + a_3 k$

In this chapter we consider applications of the definite integral to calculating geometric quantities such as volumes. The idea will be to dissect the three dimensional objects into pieces that resemble disks or shells, whose volumes we can approximate with simple formulae.
