Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances.. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

California State Standard: Students know how to calculate the concentration of a solute in terms of grams per liter, molarity, parts per million, and percent composition.. Grams per liter represent the mass of solute divided by the volume of solution, in liters. This measure of concentration is most often used when discussing the solubility of a solid in solution.

Solution concentration can be described quantitatively in several ways. Two of them are molarity and molality. Molarity is the ratio of moles of solute to liters of solution. Molality is the ratio of moles of solute to kilograms of solvent. This quiz will cover molarity and molality problems. You ...
