Acidbase titrations can be used to measure the concentration of an acid or base in solution, to calculate the formula (molar) mass of an unknown acid or base, and to determine the equilibrium constant of a weak acid ( $K_a$ ) or of a weak base ( $K_b$ ).

Lab #14A - Acid-Base Titrations. This method utilizes the fact that when the acid is half-neutralized, concentration of the weak acid (HA) equals the concentration of the conjugate base on the product side. In other words,  $[HA] = [A^-]$ . So these terms cancel in the above equation. That leaves  $K_a = \frac{[H^+][O^{2-}]}{[H_3O^+]}$ .

### Acid base titrations lab report | SAC Homberg

An acid-base titration is a neutralization reaction performed in the lab to determine an unknown concentration of acid or base. The moles of acid will equal the moles of the base at the equivalence point. So, if you know one value, you automatically know the other. Here's how to perform the calculation to find your unknown:

### Acid-Base Titration Calculation - ThoughtCo

The completed reaction of a titration is usually indicated by a color change or an electrical measurement. An acid/base neutralization reaction will yield salt and water. In an acid-base titration, the neutralization reaction between the acid and base can be measured with either a color indicator or a pH meter.

### **Selecting Indicators for Acid-Base Titrations Lab Explanation**

Acid-base titrations are excellent methods for students to design their own experiments and start thinking quantitatively in the lab! A common question chemists have to answer is how much of something is present in a sample or a product.

The reaction of an acid with a base to make a salt and water is a common reaction in the laboratory, partly because so many compounds can act as acids or bases. Another reason that acid-base reactions are so prevalent is because they are often used to determine quantitative amounts of one or the other.

This is because the strong acid and strong base balance each other, however, the strong base is stronger than the weak acid so the solution is more basic. 6. Compare and sketch a titration graph for a strong acid/strong base titration and the same titration after a buffer solution has been added.
