ECOLOGY: The Study of Ecosystems - University of Miami

Tundra tends to be windy, with winds often blowing upwards of 50-100 km/h (30-60 mph). However, in terms of precipitation, it is desert-like, with only about 150-250 mm (6-10 in) falling per year (the summer is typically the season of maximum precipitation).

Tundra - Wikipedia

Habitat Animal Printouts. The Earth has many different environments, varying in temperature, moisture, light, and many other factors. Each of these habitats has distinct life forms living in it, forming complex communities of interdependent organisms. A complex community of plants and animals in a region and a climate is called a biome.

Biology 2 & 2A

Drunken trees, tilted trees, or a drunken forest, is a stand of trees displaced from their normal vertical alignment.. This most commonly occurs in northern subarctic taiga forests of black spruce (*Picea mariana*) under which discontinuous permafrost or ice wedges have melted, causing trees to tilt at various angles.

Drunken trees - Wikipedia

What is a Biome? Variations in natural environment, including fauna and flora, are determined by an area's climate, land formation and composition. Biomes are extremely important to continue life on Earth as it is known today, as each one helps to balance other biomes through climate and variation, and provides unique necessities to both biome and human.
