Charging and discharging of a capacitor 71 Figure 5.6: Exponential charging of a capacitor 5.5 Experiment B To study the discharging of a capacitor As shown in Appendix II, the voltage across the capacitor during discharge can be represented by $V = V_0 e^{-t/RC}$ (5.8) You may study this case exactly in the same way as the charging in Expt A.

5. Charging and discharging of a capacitor

Now the time taken to charge fully is called time constant of a capacitor. This time can be varied by connecting a resistor in series with capacitor. When high resistor is connected voltage drop across capacitor is reduced so it takes long time to charge fully. Vice-versa for low resistor. The relation is exponential charging and discharging.
