The brain is an organ that serves as the center of the nervous system in all vertebrate and most invertebrate animals. The brain is located in the head, usually close to the sensory organs for senses such as vision. The brain is the most complex organ in a vertebrate's body. In a human, the cerebral cortex contains approximately 14–16 billion neurons, and the estimated number of neurons in ...

The cetacean skeleton is largely made up of cortical bone, which stabilizes the animal in the water. For this reason, the usual terrestrial compact bones, which are finely woven cancellous bone, are replaced with lighter and more elastic material. In many places, bone elements are replaced by cartilage and even fat, thereby improving their hydrostatic qualities.

1. Introduction. Plastic pollution is ubiquitous in the marine environment, accumulating on the surface of the oceans, throughout the water column and on the seabed (Thompson et al., 2004; Barnes et al., 2009). It has been estimated that 4.8–12.7 million tons of plastic could be entering the marine environment annually (Jambeck et al., 2015), the majority originating from land-based sources ...

In a recent study, Withers et al examined the effects of reducing agronomical optimum soil phosphorus levels. They concluded that these optimum levels still posed a eutrophication risk and that innovations in agro-engineering of soils, crops and fertilisers could reduce soil phosphorus levels and with it the risk of eutrophication, without affecting productivity adversely.
