Plants produce a variety of compounds that can be divided into primary metabolites and secondary metabolites. Primary metabolites are essential for the survival of the plant and include sugars, proteins and amino acids. Secondary metabolites were once believed to be waste products. They are not essential to the plant's survival, but the plant does suffer [...]

Study on Actual Situation of Medicinal Plants in Ethiopia

In biology, taxonomy (from Ancient Greek τάξις (), meaning 'arrangement', and -νομία (), meaning 'method') is the science of naming, defining (circumscribing) and classifying groups of biological organisms on the basis of shared characteristics. Organisms are grouped together into taxa (singular: taxon) and these groups are given a taxonomic rank; groups of a given rank can be ...

Taxonomy (biology) - Wikipedia

Plants are extremely complex and diverse, and there are millions of different plant species— some that haven't even been fully discovered and studied yet! In order to continue the study and organization of plants, botanists (scientists who study plants) must find a way to categorize the many different species. While all plants are made up of similar parts that are essential in maintaining ...

Lesson 4: Plant Classification | MpalaLive

FORCES . A force is any push or pull that causes an object to move, stop, or change speed or direction.; The greater the force, the greater the change in motion will be. The more massive an object, the less effect a given force will have on the object.; Unless acted on by a force, objects in motion tend to stay in motion and objects at rest remain at rest.

Purpose. To show students that many kinds of living things can be sorted into groups in many ways using various features to decide which things belong to which group and that classification schemes will vary with purpose.

Classification 1: Classification Scheme - Science NetLinks

Definition. All living things were traditionally placed into one of two groups, plants and animals. This classification may date from Aristotle (384 BC – 322 BC), who made the distinction between plants, which generally do not move, and animals, which often are mobile to catch their food. Much later, when Linnaeus (1707–1778) created the basis of the modern system of scientific ...
