Schoolwork. I had a grand—brilliant, even—idea in 2012 to publicly archive all of my academia (saved at the time only locally on now long-trashed hard drives) on this website with the notion that I may attract scholars seeking educational refuge, farcically hoping to shortcut the system through search engine; and that I, in the process, would reap ad revenue from these forlorn minds.

A linear encoder is a sensor, transducer or readhead paired with a scale that encodes position. The sensor reads the scale in order to convert the encoded position into an analog or digital signal, which can then be decoded into position by a digital readout (DRO) or motion controller.. The encoder can be either incremental or absolute. Motion can be determined by change in position over time.
