LabBench Activity Plant Pigments and Photosynthesis. by Theresa Knapp Holtzclaw. Introduction. In photosynthesis, plant cells convert light energy into chemical energy that is stored in sugars and other organic compounds. Critical to the process is chlorophyll, the primary photosynthetic pigment in chloroplasts. This laboratory has two separate activities: I. Plant Pigment Chromatography, and II.

The periodic table, also known as the periodic table of elements, is a tabular display of the chemical elements, which are arranged by atomic number, electron configuration, and recurring chemical properties. The structure of the table shows periodic trends. The seven rows of the table, called periods, generally have metals on the left and non-metals on the right.

Aluminium (also spelled aluminum) is a chemical element with the symbol Al and atomic number 13. It is a silvery-white, soft, paramagnetic and ductile metal in the boron group. By mass, aluminium makes up about 8% of the Earth's crust; it is the third most abundant element after oxygen and silicon and the most abundant metal in the crust, though it is less common in the mantle below.
