The near equality in numbers can be attributed to Charles Law. Charles Law states that “as temperature increases, so does the volume of a gas sample when the pressure is held constant”. The result of V_1/T_1 and V_2/T_2 were very close to each other. This is due to the fact that this experiment was done in a closed system.

Charles's law states that if a given quantity of gas is held at a constant pressure, its volume is directly proportional to the absolute temperature. As the temperature of the gas increases the gas molecules will begin to move around more quickly and hit the walls of their container with more force thus the volume will increase.
