Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances.. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

The lower critical solution temperature (LCST) or lower consolute temperature is the critical temperature below which the components of a mixture are miscible for all compositions. The word lower indicates that the LCST is a lower bound to a temperature interval of partial miscibility, or miscibility for certain compositions only.. The phase behavior of polymer solutions is an important ...

Any alkali added to the solution is consumed by the hydronium ions. These ions are mostly regenerated as the equilibrium moves to the right and some of the acid dissociates into hydronium ions and the conjugate base. If a strong acid is added, the conjugate base is protonated, and the pH is almost ...

1. Introduction. Over the last few decades, ubiquitous contamination with various inorganic and organic substances has caused serious problems all over the world , .One reason is the misuse or overuse of antibiotics e.g. for agricultural purposes, which enrich the population of multi-resistant pathogens .In many countries with a low human development index (HDI), particularly in Africa and ...
