Scientific control studies in medicine that attempt to determine whether something is a significant causal factor in producing a specific effect often use placebos as a control. In most of these studies, the placebo is defined as an inert substance, and it is pitted against an active substance to see if there is any significant difference in outcome in different groups.

Piaget theory started out with two main concepts, accommodation, and assimilation. Accommodation is the process of taking new information in one's environment and altering pre-existing information in order to fit in the new information. This is important because it establishes how people are going to take in new concepts, schemas, knowledge, etc.

### **Piaget Theory: Childhood cognitive developmental stages**

Throw reality out the window for a second and entertain a hypothetical. Imagine you can only do one exercise for the rest of your life. If you had to choose a single exercise to do for the rest of your life, right here today, what would it be? It's a popular question with a divergent set of ...
