The characteristic impedance (Z_0) of an infinite transmission line at a given angular frequency is the ratio of the voltage and current of a pure sinusoidal wave of the same frequency travelling along the line. This definition extends to DC by letting ω tend to 0, and subsists for finite transmission lines until the wave reaches the end of the line. In this case, there will be in general a ...

Characteristic impedance - Wikipedia

In radio-frequency engineering, a transmission line is a specialized cable or other structure designed to conduct alternating current of radio frequency, that is, currents with a frequency high enough that their wave nature must be taken into account. Transmission lines are used for purposes such as connecting radio transmitters and receivers with their antennas (they are then called feed ...
