IMHO the method UserForm_Initialize should remain private because it is event handler for Initialize event of the UserForm.. This event handler is called when new instance of the UserForm is created. In this even handler u can initialize the private members of UserForm1 class. Example: Standard module code:

excel - Calling UserForm_Initialize() in a Module - Stack ...

What would the syntax be if previously Foo1 was in the parent directory and one coded something like from Foo1 import *. Is there a way to achieve that same effect so you don't have to prefix everything with Foo1? - jxramos Apr 12 '17 at 23:41

python - Import module from subfolder - Stack Overflow

A number of people have requested that each animation open in a blank window rather than be embedded within the text. The links below will do just that.
