The deployment pipeline is the key pattern that enables continuous delivery. A deployment pipeline implementation provides visibility into the production readiness of your applications by giving feedback on every change to your system. It also enables team members to self-service deployments into their environments. Learn how to create and manage a deployment pipeline, and how to use the ...

Continuous Delivery: Anatomy of the Deployment Pipeline ...

The database naming standard should be designed to minimize name changes across environments. For example, embedding a T into the name for “test” and a P for “production” is a bad idea. It is especially important to avoid this approach for user-visible database objects such as columns, tables, and views.
