Tissue Membranes. A tissue membrane is a thin layer or sheet of cells that covers the outside of the body (for example, skin), the organs (for example, pericardium), internal passageways that lead to the exterior of the body (for example, abdominal mesenteries), and the lining of the moveable joint cavities. There are two basic types of tissue membranes: connective tissue and epithelial ...

The ability to accurately assess the likelihood of future violent acts is important to clinicians, policymakers, and the public alike. In this context, risk assessment typically involves arriving at an estimate of the likelihood that an offender will recidivate after the individual experiences legal consequences or intervention for a prior criminal act.

h4. Chapter 2: Integumentary System The skin is the largest organ in the body. The normal adult has over 20 square feet of skin so it is easy to understand how something can go wrong with this much area to cover. As a membranous barrier between a person's outer and inner surroundings, the skin responds to external changes and also reflects internal changes.
