The near equality in numbers can be attributed to Charles Law. Charles Law states that "as temperature increases, so does the volume of a gas sample when the pressure is held constant". The result of V_1/T_1 and V_2/T_2 were very close to each other. This is due to the fact that this experiment was done in a closed system.

Charles' Law is a law which explains this correlation. It states that temperature and volume of a gas are proportional to each other, so when the absolute temperature increase, the volume increases. In the lab, water was boiled and it's temperature was taken (102.3 C).
