Data structures. This chapter summarises the most important data structures in base R. You've probably used many (if not all) of them before, but you may not have thought deeply about how they are interrelated.

## **Data structures · Advanced R. - Hadley Wickham**

The rest of this chapter introduces four forms of atomic data of BSL: numbers, strings, images, and Boolean values. The next volume, How to Design Components, will explain how to design atomic data. We use the word "atomic" here in analogy to physics. You cannot peek inside atomic pieces of data, but you do have functions that combine several pieces of atomic data into another one ...

From this code, you can see that `lapply()` is a wrapper for a common for loop pattern: create a container for output, apply `f()` to each component of a list, and fill the container with the results. All other for loop functionals are variations on this theme: they simply use different types of input or output.

### Functionals - Advanced R.

Anonymization. This is a type of de-identification where all sensitive data is removed. More details and a definition of anonymization are available in a previous blog post.. Code set. Also referred to as HL7 ® tables, vocabulary or code table. It is a list of codes and their meanings used to codify information included in HL7 ® messages. Codes could be defined by the HL7 ® standard itself ...
