where R_A and R_B are fouling resistance, which decreases the overall heat transfer coefficient, resulting in decreasing heat transfer efficiencies. The physical reason for a decrease in efficiency is because the thermal conductivity of the fouling layer is much less than that of the metal surface, and, also because of the additional length over which heat transfer must now take place ...

A recent trend in several low-income developing countries has been a rapid scaling-up of public investment. It is argued that in the presence of limited absorptive capacity countries are not able – in terms of skills, institutions, and management – to translate additional public investment into sustained output growth.

The scale of a map is the ratio of a distance on the map to the corresponding distance on the ground. This simple concept is complicated by the curvature of the Earth's surface, which forces scale to vary across a map. Because of this variation, the concept of scale becomes meaningful in two distinct ways.

An ability check tests a character's or monster's innate talent and training in an effort to overcome a challenge. The GM calls for an ability check when a character or monster attempts an action (other than an attack) that has a chance of failure. When the outcome is uncertain, the dice determine the results.

In mathematics, more specifically in fractal geometry, a fractal dimension is a ratio providing a statistical index of complexity comparing how detail in a pattern (strictly speaking, a fractal pattern) changes with the scale at which it is measured. It has also been characterized as a measure of the space-filling capacity of a pattern that tells how a fractal scales differently from the space ...

The size of t is available to both the owner watermark and to the attacker. As long as t remains in the imperceptible region, there exists some t' use by the attacker where $l' = v + t'$ and there is no perceptible difference between l and l' . This attack may be used to remove or replace the t region. A
