This Dynamic Earth--Contents [USGS]

3.1 The Rock Cycle The rock components of the crust are slowly but constantly being changed from one form to another and the processes involved are summarized in the rock cycle (Figure 3.2). The rock cycle is driven by two forces: (1) Earth's internal heat engine, which moves material around in the core and the mantle and leads to slow but significant changes within the crust, and (2) the ...

Convection is the heat transfer due to the bulk movement of molecules within fluids such as gases and liquids, including molten rock (). Convection includes sub-mechanisms of advection (directional bulk-flow transfer of heat), and diffusion (non-directional transfer of energy or mass particles along a concentration gradient).

Convection - Wikipedia

"The moment one has offered an original explanation for a phenomenon, which seems satisfactory, that moment affection for his intellectual child springs into existence, and as the explanation grows into a definite theory his parental affections cluster about his offspring and it grows more and more dear to him. ...

Weather Wiz Kids weather information for kids

An earthquake (also known as a quake, tremor or temblor) is the shaking of the surface of the Earth, resulting from the sudden release of energy in the Earth's lithosphere that creates seismic waves. Earthquakes can range in size from those that are so weak that they cannot be felt to those violent enough to toss people around and destroy whole cities.

Earthquake - Wikipedia

Students learn about the development of the geologic time scale, the major time periods in earth's history, and the role fossils play in this history.

Fossils and Geologic Time - Science NetLinks

Although a plateau is usually considered a single landmass, some plateaus may be composed of numerous smaller plateaus. Such is the case with the Colorado Plateau in the four-corners region (where the boundaries of the four states of Utah, Colorado, Arizona, and New Mexico meet) of the American Southwest.
