Characteristics that all waves have in common are wavelength, amplitude and frequency. Apart from these properties, different types of waves have a number of varying characteristics. A wave is defined as a repetitive disturbance traveling through a medium going from one location to another. Continue Reading.

### **What Are the Characteristics of All Waves? | Reference.com**

A wave that moves the medium in a direction perpendicular to the direction in which the wave travels. The highest part of a transverse wave. The lowest part of a transverse wave. A wave that moves the medium in a direction parallel to the direction in which the wave travels.

### **Characteristics of Waves Flashcards | Quizlet**

Answer: E. This is another boundary behavior question with a mathematical slant to it. The frequency of the incident and transmitted waves are always the same. Thus, use  $f = v/w$  to find the frequency of the incident wave - 2.2 Hz. The frequency of the transmitted wave is also 2.2 Hz, the wavelength is 3.0 m, and so the speed is  $f \cdot w = 6.6 \text{ m/s}$ .

### **Waves Review - Answers**

If you ask a room full of people to picture a wave, they might all think of something different - be it at the ocean, a soundwave, maybe even a person waving. Today we'll be taking a look at the characteristics of waves, asking you a number of questions regarding how they work.
