In this lesson, we'll be learning about the biological process of assimilation and its role in the digestive system. We'll learn how this happens in humans and compare it to other animals.

Assimilation of Food in the Digestive System - Study.com

The human digestive system consists of the gastrointestinal tract plus the accessory organs of digestion (the tongue, salivary glands, pancreas, liver, and gallbladder). Digestion involves the breakdown of food into smaller and smaller components, until they can be absorbed and assimilated into the body. The process of digestion has many stages. The first stage is the cephalic phase of ...

1. An Introduction to Anatomy and Physiology

Tissue Membranes. A tissue membrane is a thin layer or sheet of cells that covers the outside of the body (for example, skin), the organs (for example, pericardium), internal passageways that lead to the exterior of the body (for example, abdominal mesenteries), and the lining of the moveable joint cavities. There are two basic types of tissue membranes: connective tissue and epithelial ...

The main vessel of the hepatic portal system is the hepatic portal vein (Figures 3.31 and 3.32), a large vein that lies in the gastrohepatoduodenal ligament alongside the hepatic artery and anterior part of the bile duct. The hepatic portal vein is formed by the confluence of three main vessels, the gastric, pancreaticomesenteric, and lienomesenteric veins.
