What Is DNA? Scientists have discovered an unmistakable language within all living things. Like a miniature library, DNA stores piles of information in extraordinary molecules that specify the details of everything from the shape of flower petals to the color of your eyes.

Genetics | Answers in Genesis

Down syndrome — also known as trisomy 21 — is a condition in which a person is born with extra genetic material from chromosome 21, one of the 23 human chromosomes. All human chromosomes usually occur in pairs, with one copy inherited from a person's mother and one from the father. Most people ...

Down Syndrome and Alzheimer's | Symptoms & Treatments

Heredity is the passing on of traits from parents to their offspring, either through asexual reproduction or sexual reproduction, the offspring cells or organisms acquire the genetic information of their parents. Through heredity, variations between individuals can accumulate and cause species to evolve by natural selection. The study of heredity in biology is genetics

Heredity - Wikipedia

Color blindness, also known as color vision deficiency, is the decreased ability to see color or differences in color. Simple tasks such as selecting ripe fruit, choosing clothing, and reading traffic lights can be more challenging. Color blindness may also make some educational activities more difficult. However, problems are generally minor, and most people find that they can adapt.

Color blindness - Wikipedia

Summary. Y-chromosome DNA shared by men with surnames that match names in ancient pedigrees of men descended from three Colla brothers who lived in the 4th-century in a part of Ireland called Airghialla or Oriel. Colla Josiah McGuire discovered Clan Colla DNA in 2007. The Z3000 SNP identifies Clan Colla DNA. It was named by non-Colla Mike Walsh in 2013.
