Unique Key (UK): It's a column or a group of columns that can identify a uniqueness in a row.

Primary Key (PK): It's also a column or group of columns that can identify a uniqueness in a row. So the Primary key is just another name for unique key, but the default implementation in SQL Server is different for Primary and Unique Key.

Trying to introduce chemical thermodynamics to beginning students is always problematic; to do it "properly" requires a degree of rigor that rarely succeeds for more than a small fraction of the class.

### **Thermodynamics of chemical equilibrium**

On my HP EliteBook the default setting is also that the fn button is inverse (i.e. when you press any of the function keys, like F1 for help or F5 to refresh, then instead of triggering the Function-keys, it changes the volume or something random), very annoying.

### **laptop - How to invert the Fn key - Super User**

Usually, you aren't given the hydrogen ion concentration in a problem but have to find it from a chemical reaction or acid concentration. Whether this is easy or not depends on whether you're dealing with a strong acid or a weak acid. Most problems asking for pH are for strong acids because they completely dissociate into their ions in water.
