In biology, an organism (from Greek: ὁργανισμός, organismos) is any individual entity that exhibits the properties of life. It is a synonym for "life form". Organisms are classified by taxonomy into specified groups such as the multicellular animals, plants, and fungi; or unicellular microorganisms such as a protists, bacteria, and archaea. All types of organisms are capable of ...

Organism - Wikipedia

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

GENOMICS. N.B. Many of the tools that one needs for the analysis of genomes can be found in the DNA Sequence Analysis section. Here we have unique tools for genomic analysis which do not fit easily in that section.

GENOMICS - molbiol-tools.ca

The only known example in nature of a part that can spin all the way around to push an organism is the flagellum. The flagellum is a tail used like a propeller to push single-celled prokaryotes. The bacterial flagellum is the best known example. About half of all known bacteria have at least one flagellum. This means that rotation may actually be the most common way of moving around found in nature.
