Tidal range is the height difference between high tide and low tide. Tides are the rise and fall of sea levels caused by gravitational forces exerted by the Moon and Sun and the rotation of Earth. Tidal range is not constant but changes depending on the locations of the Moon and Sun. The most extreme tidal range occurs during spring tides, when the gravitational forces of both the Moon and Sun ...

The Caribbean Sea is largely situated on the Caribbean Plate. Estimates of the sea's age range from 20,000 years to 570 million years. The Caribbean Sea floor is divided into five basins separated from each other by underwater ridges and mountain ranges.

Caribbean Sea - New World Encyclopedia

Ocean basins can be described as saucer-like depressions of the seabed. They vary in size from relatively minor features of the continental margin to vast structural divisions of the deep ocean. The largest ocean basins are 3 to 5 kilometers (2 to 3 miles) deep and stretch from the outer margins of the continents to the mid-ocean ridges.
