A molecular formula is a representation of a molecule that uses chemical symbols to indicate the types of atoms followed by subscripts to show the number of atoms of each type in the molecule. (A subscript is used only when more than one atom of a given type is present.) Molecular formulas are also used as abbreviations for the names of compounds.

Explain what is Standard Deviation, Skewness and Kurtosis. Answer is kinda extra, because it was tough to find. Standard Deviation: a quantity expressing by how much the members of a group differ from the mean value for the group. The Standard Deviation is a more accurate and detailed estimate of dispersion because an outlier can greatly exaggerate the range (as was true in this example where ...
