Over 250 chemical reaction equations to balance - with the key to check your answers.

Balancing reaction equations - over 250 reactions to ...

In chemistry, an ester is a chemical compound derived from an acid (organic or inorganic) in which at least one -OH (hydroxyl) group is replaced by an -O-alkyl group. Usually, esters are derived from a carboxylic acid and an alcohol. Glycerides, which are fatty acid esters of glycerol, are important esters in biology, being one of the main classes of lipids, and making up the bulk of ...

Ester - Wikipedia

Words to Know Amino acid: An organic compound that contains two special groups of atoms known as the amino group and the carboxylic acid group. Catalyst: Any chemical compound that speeds up the rate of a chemical reaction. Chemical reaction: Any change in which at least one new substance is formed. Lock-and-key model: One of the ways in which enzymes bring about chemical reactions.

Answers with explanation for Valusia County Bio EOC Exam download from Mr. Allen's page. You MUST write out the exact answers as I have written them here.

Answer Key - Mr. Allen's Biology Class

Enzymes / ' ε n z a i m z / are macromolecular biological catalysts. Enzymes accelerate chemical reactions. The molecules upon which enzymes may act are called substrates and the enzyme converts the substrates into different molecules known as products. Almost all metabolic processes in the cell need enzyme catalysis in order to occur at rates fast enough to sustain life.

Answer Key for the Challenge Questions Found in the CEN ...

Definition. The concentration of a chemical substance expresses the amount of a substance present in a mixture. There are many different ways to express concentration. Chemists use the term solute to describe the substance of interest and the term solvent to describe the material in which the solute is dissolved. For example, in a can of soda pop (a solution of sugar in carbonated water), there ...
