By the end of this section, you will be able to: The skeletal system is the body system composed of bones, cartilages, ligaments and other tissues that perform essential functions for the human body. Bone tissue, or osseous tissue, is a hard, dense connective tissue that forms most of the adult skeleton, the internal support structure of the body.

### **6.1 The Functions of the Skeletal System | Anatomy ...**

Bones provide a system of levers on which muscles act to produce movement. Levers are rigid rods that can be moved about a fixed point. In addition, bones contain reserves of minerals, mainly calcium salts, that are impor- tant to many body processes. Finally, bones are the site of blood cell formation.
