Dolphin is a common name of aquatic mammals within the infraorder Cetacea. The term dolphin usually refers to the extant families Delphinidae (the oceanic dolphins), Platanistidae (the Indian river dolphins), Iniidae (the new world river dolphins), and Pontoporiidae (the brackish dolphins), and the extinct Lipotidae (baiji or Chinese river dolphin). There are 40 extant species named as dolphins.

Taxonomy Classification. For many decades, the precise taxonomic classification of the giant panda was under debate because it shares characteristics with both bears and raccoons. However, molecular studies indicate the giant panda is a true bear, part of the family Ursidae. These studies show it differentiated early (about 19 million years ago) from the main ursine stock; since it is the most ...

NAC: CHAPTER 445A - WATER CONTROLS

Global demand for livestock products is expected to double by 2050, mainly due to improvement in the worldwide standard of living. Meanwhile, climate change is a threat to livestock production because of the impact on quality of feed crop and forage, water availability, animal and milk production, livestock diseases, animal reproduction, and biodiversity.

vol 6 pg 1. A Philosophy of Education Book 1. Introduction. These are anxious days for all who are engaged in education. We rejoiced in the fortitude, valour and devotion shown by our men in the War and recognize that these things are due to the Schools as well as to the fact that England still breeds "very valiant creatures."
