Chemical Equilibrium Post Lab

Chemical Equilibrium Lab Introduction: The purpose of this experiment was to quantitatively look at reactions and see how their outcomes followed Le Chatelier's principle. One was also supposed to gain a deeper understanding of how adding more of a reactant or a product can shift the ionic equilibrium of a mixture.

chemical equilibrium. 2. The calculated value of the equilibrium constant indicates that there are mostly products since it is $280 > 1$. Also, since 280 is quite large (compared to the Haber process which has a K of about 30), it should prefer the products. 3. A spectrophotometer is a device that measures the amount of light that can pass through

Experiment 3 Measurement of an Equilibrium Constant Introduction: Most chemical reactions (e.g., the "generic" $A + B \rightarrow 2C$) are reversible, meaning they have a forward reaction ($A + B$ forming $2C$) and a backward reaction ($2C$ forming $A + B$). Initially, when the concentrations of A and B are much higher than the

Finding the Constant K c 4/21/15 Maya Parks Partners: Ben Seufert, Caleb Shumpert Abstract: This lab was performed to find the chemical equilibrium constant K c for the reaction $\text{Fe}^{3+} + \text{SCN}^- \rightleftharpoons \text{FeSCN}^{2+}$ using the colorimeter. We found the absorbance of different concentrations of the solutions which we then used to calculate the concentration of ...

The lab handout is attached below in both Word and PDF format. (Note: Hat tip to Mr. Tony Locke, who shared this lab with an IB workshop I attended. I have modified it some along the way.) The lab is a pretty basic look at causing disruptions to an equilibrium and making predictions - and then observations - based on Le Châtelier's Principle.
