Chapter 7 Anatomy and Physiology. 26 Enamel is formed by ameloblasts during tooth development. Amelogenesis (enamel production) stops prior to tooth eruption and no more enamel is produced. Once the tooth has erupted into the oral cavity, enamel is lost gradually (or rapidly if the animal has a chewing vice) to chemical and mechanical forces.

Learning Objectives. Whereas anatomy is about structure, physiology is about function. Human physiology is the scientific study of the chemistry and physics of the structures of the body and the ways in which they work together to support the functions of life. Much of the study of physiology centers on the body's tendency toward homeostasis.
