The resistor is short circuited and the one is open. Therefore, their currents are zero and . Now that we have found and , we can calculate in the original circuit shown in Fig. (1-27-1) using the Thévenin equivalent circuit depicted in Fig. (1-27-3). It is trivial that. We used the Thévenin Theorem to solve this circuit. A much more easier way to find here is to use the current division rule.
