The many-worlds interpretation is an interpretation of quantum mechanics that asserts the objective reality of the universal wavefunction and denies the actuality of wavefunction collapse. The existence of the other worlds makes it possible to remove randomness and action at a distance from quantum theory and thus from all physics.

In Europe, there is only one Classical language common to the whole area, and that is Greek. In a large and dominant subdivision of Europe, we also find Latin as the Classical language. Historically, that region can be distinguished as "Francia." It can also be called simply "Latin" Europe, although some might think that this would only apply to areas with languages, like French and Spanish ...
