INTRODUCTION In 1861, Thomas Graham's investigations on diffusion led him to classify substances as crystalloids or colloids based on their ability to diffuse through a parchment membrane. Crystalloids passed readily through the membrane, whereas colloids (from the Greek word for glue) did not. Intravenous fluids are similarly classified based on their ability to pass through...

Product Reports. Skip to the Lab Analysis Summary. There are three distinctly different types of silver that are labeled and sold on the market as "colloidal silver"; they are ionic silver, silver protein, and true colloidal silver. Consumers seeking true colloidal silver are often at a disadvantage because each of these products represents themselves as colloidal silver.

Colloid crystals diversity defies description. Colloids are particles of nanometres (10^{-9} m) up to several micrometer dimensions (also commonly referred to as nanoparticles) that exist as suspensions in water or other solvents; and colloid crystals are literally crystals made of colloid particles arranged in an orderly way, like atoms in ordinary crystals.

Solutions and Mixtures Before we dive into solutions, let's separate solutions from other types of mixtures. Solutions are groups of molecules that are mixed and evenly distributed in a system. Scientists say that solutions are homogenous systems. Everything in a solution is evenly spread out and thoroughly mixed.
