Mitosis is usually used for the growth and replacement of somatic cells, while meiosis produces the gametes or spores used in an organism's reproduction. Mitosis is the first of these studied in this lab. It is easily observed in cells that are growing at a rapid pace such as whitefish blastula or onion root tips, which are used in this lab.

Meiosis is more complex than mitosis and involves two nuclear divisions called Meiosis I and Meiosis II. These divisions result in the production of four haploid gametes and allow for genetic variation due to crossing over of genetic material. Prior to the process, interphase involves replication of the DNA.

AP Lab #3 - Mitosis and Meiosis Section I: During this lab, we were to observe and recognize mitosis in onion root tip and whitefish cells, estimating the time of mitotic stages, stimulate the stages of meiosis by using chromosome sets, and calculate the distance of genes from the centromere. These activities helped us get a better understanding of the differences between mitosis and meiosis ...

### **AP Lab 3: Mitosis and Meiosis Lab Report - Allysha's e ...**

Mitosis is more common than meiosis and has a wider variety of functions. Meiosis has a narrow but significant purpose: assisting sexual reproduction. In mitosis, a cell makes an exact clone of itself. This process is what is behind the growth of children into adults, the healing of cuts and bruises, and even the regrowth of skin, limbs, and appendages in animals like geckos and lizards.

Mitosis may have been studied earlier in the context of cell studies, or simple cell reproduction. But after an introduction to meiosis, where they've had a chance to get the essential ideas, along with distinctions from mitosis, and the significance of meiosis, have them do this lab.

### **Lesson: Mitosis & Meiosis on the Table**

The objectives of this lab are as follows: 1. To review the structure of a chromosome. 2. To study the events associated with meiosis. 3. To apply this knowledge to human genetics by analyzing a karyotype. Introduction: Meiosis is the second important kind of nuclear division. It resembles mitosis in many ways but the consequences of meiotic ...

### **General Biology Lab #10 - Meiosis - Rutgers University**

Mitosis versus meiosis . Cells divide and reproduce in two ways, mitosis and meiosis. Mitosis results in two identical daughter cells, whereas meiosis results in four sex cells. Below we highlight the key differences and similarities between the two types of cell division.

Comparison of the processes of mitosis and meiosis. Mitosis produces two diploid (2n) somatic cells that are genetically identical to each other and the original parent cell, whereas meiosis produces four haploid (n) gametes that are genetically unique from each other and the original parent (germ) cell. Mitosis involves one cell division, whereas meiosis involves two cell divisions.

### **Comparing mitosis and meiosis (video) | Khan Academy**

Lab 3 Mitosis and Meiosis Introduction: All new cells come from previously existing cells. New cells are formed by karyokinesis- the process in cell division which involves replication of the cell's nucleus and cytokinesis-the process in cell division which involves division of the cytoplasm. Two types of nuclear division include mitosis and meiosis.

### **ap lab 3 sample 3 mitosis - BIOLOGY JUNCTION**

Mitosis, which takes place in a series of steps described next, follows interphase. In prophase, the nuclear envelope breaks down, and the cell's duplicated genetic material, present in the nucleus in a diffuse structure called chromatin, condenses into visible bodies called chromosomes.

(n) In step 9, how does metaphase I of meiosis differ from metaphase of mitosis? (o) What is the haploid chromosome number? (p) In step 10, compare the resulting daughter cells of mitosis and meiosis.

### **Student Worksheet for Activity 3.7.1 Comparing Mitosis and ...**

Asexual reproduction relies on a process called mitosis, in which the nucleus of a cell divides to create two new nuclei, each containing an identical copy of DNA. Mitosis allows the cells in your body to divide and regenerate—your hair to grow, your skin to heal after being wounded.
