Introduction to the Flame Test Lab: The Flame Test lab was an in-class lab where we tested chemicals in the flames to see the wide range of colors in the color spectrum. The secondary purpose of the lab was to identify unknown compounds that we would test and then guess as to what they were. The Flame Test lab was done in several parts.

Best Answer: The purpose of the flame test is to observe when electrons jump down to the second energy level, (a lower energy level), from a higher energy thus emitting energy in the form of light in the visible region of the electromagnetic spectrum. another purpose is to be able to identify

unknown salt compounds by comparing their colors of the metal ion to colors of known metal ions.

### **Flame Tests Lab - Barberton High School**

The flame test is used to visually determine the identity of an unknown metal or metalloid ion based on the characteristic color the salt turns the flame of a Bunsen burner. The heat of the flame excites the electrons of the metals ions, causing them to emit visible light. Every element has a signature emission spectrum that can be used to differentiate between one element and another.
