Earlier in Lesson 6, four kinematic equations were introduced and discussed. A useful problem-solving strategy was presented for use with these equations and two examples were given that illustrated the use of the strategy. Then, the application of the kinematic equations and the problem-solving strategy to free-fall motion was discussed and illustrated.

Classical mechanics is focused on interactions and their consequences. For example, the tires and the road surface mutually push on each other. In other words, they interact. Specifically, the road surface provides some resistance to the spinning tires called friction that pushes against the tires.. As long as the contact—or "grip"—between the tires and the road surface is strong, the ...

Problem In the electronic circuit shown below, the voltage E (in Volts) and resistance r (in Ohms) are constant. R is the resistance of a load. In such a circuit, the electric current i is given by $i = E / (r + R)$ and the power P delivered to the load R is given by $P = R i^2$ and R being positive, determine R so that the power P delivered to R is maximum. ...
