Paul Andersen takes you on a tour of the cell. He starts by explaining the difference between prokaryotic and eukaryotic cells. He also explains why cells are small but not infinitely small.

A Tour of the Cell — bozemanscience

In biology and medicine, a host is an organism that harbours a parasitic, a mutualistic, or a commensalist guest (), the guest typically being provided with nourishment and shelter. Examples include animals playing host to parasitic worms (e.g. nematodes), cells harbouring pathogenic (disease-causing) viruses, a bean plant hosting mutualistic (helpful) nitrogen-fixing bacteria.

Host (biology) - Wikipedia

Plant: Plant, any multicellular eukaryotic, usually photosynthetic life-form in the kingdom Plantae. There are an estimated 390,900 diffferent species of plants known to science. Learn more about the plant kingdom, including the life and evolutionary histories and physical characteristics of the major plant groups.

Roller Coaster. For many people, there is only one reason to go to an amusement park: the roller coaster. Some people call it the "scream machine," with good reason.

Amusement Park Physics -- Roller Coaster - Learner

The distinction between prokaryotes and eukaryotes is considered to be the most important distinction among groups of organisms. Eukaryotic cells contain membrane-bound organelles, such as the nucleus, while prokaryotic cells do not. Differences in cellular structure of prokaryotes and eukaryotes include the presence of mitochondria and chloroplasts, the cell wall, and the structure of
