Linear time-invariant theory, commonly known as LTI system theory, investigates the response of a linear and time-invariant system to an arbitrary input signal. Trajectories of these systems are commonly measured and tracked as they move through time (e.g., an acoustic waveform), but in applications like image processing and field theory, the LTI systems also have trajectories in spatial ...

1. Introduction and The Altered Glycan Theory of Autoimmunity. Since the discovery of altered IgG glycosylation in patients with rheumatoid arthritis , there has been mounting evidence favoring the role of glycans in the pathophysiology of autoimmunity.For example, it is now well established that the type of glycan present at residue Asn-180 of IgG1 helps dictate the effector function of the ...

Introduction. The human immune system is a sensory system for intrinsic and extrinsic environmental factors. Much like other sensory systems, the immune system is dependent on sensory inputs during its development, and germ-free mice have severe immune system defects (Gensollen et al., 2016).Also, in humans, early-life exposures sensed by the immune system influence the risk of developing ...

Robust Stabilization A killer applet for the Robust Stabilization Theorem of linear control theory. Enter a nominal plant P(s), and specify an uncertainty weighting function W(s) by dragging poles and zeros with the mouse. Then design a unity-feedback compensator C(s) by dragging poles and zeros to achieve closed-loop robust stability. Includes a Fine Print document that references further ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
