Array processing is a wide area of research in the field of signal processing that extends from the simplest form of 1 dimensional line arrays to 2 and 3 dimensional array geometries. Array structure can be defined as a set of sensors that are spatially separated, e.g. radio antenna and seimic arrays.The sensors used for a specific problem may vary widely, for example microphones ...

A brief overview on underwater manipulators can be found in the underwater robots review paper by Yuh and West (2001). Antonelli (2014) provided a good theoretical background for underwater manipulators from the modeling and control point of view. However, a complete article encapsulating relevant practical and theoretical knowledge, state of the art technology as well as up to date research ...

An artificial neural network is a network of simple elements called artificial neurons, which receive input, change their internal state (activation) according to that input, and produce output depending on the input and activation.. An artificial neuron mimics the working of a biophysical neuron with inputs and outputs, but is not a biological neuron model.
